

**grade A
classroom**

Yes or No

You will need a stack
of post-it notes or
sticky labels.

Write a different keyword on
each label

For example

- science equipment
- chemical elements
- character names from a book/play
- countries

Stick a label on the back of each student.

Students move around the room and ask their peers questions to find out what their label says.

The questions they ask can only be answered with a YES or a NO.

Once 3 questions have been asked to the same student, they should move on to talk to a different student.

Once they have guessed their word correctly, they can remove their label but continue answering questions about other keywords.
