Embedding Learning

Learning is embedded when
it is fluent, secure and can
be built upon.

This takes time and lots of
practise.

Giving your students tools to help them embed their learning develops their understanding and builds their confidence.

Teachers will do many of these strategies on a daily basis.

Making them explicit to students and teaching them WHY we do them will help them to develop their toolbox of being able to embed their learning when working independently.

This is essential for effective revision and for preparing them for learning beyond school.
